PROCLAMATION 5327-APR. 25, 1985

As our cities grew, transit systems evolved to provide affordable, convenient urban transportation. The 20th Century brought the automobile, truck, intercity bus, rapid rail systems, and an expanded road system that now includes thousands of miles of interstate highways.

As has been true throughout our history, transportation today is critical to our economy and necessary to our defense. America's transportation systems have made our society the most mobile on earth. A diverse transportation network has assured the rapid, safe, and dependable movement of people and goods throughout the country and around the world.

In recognition of transportation's importance, and to honor the millions of Americans who serve and supply our transportation needs, the Congress, by joint resolution approved May 16, 1957, has requested that the third Friday in May of each year be designated as National Defense Transportation Day; and by joint resolution approved May 14, 1962, that the week in which that Friday falls be proclaimed National Transportation Week.

NOW, THEREFORE, I, RONALD REAGAN, President of the United States of America, do hereby designate Friday, May 17, 1985, as National Defense Transportation Day and the week beginning May 12, 1985, through May 18, 1985, as National Transportation Week. I urge the people of the United States to observe these occasions with appropriate ceremonies that will give full recognition to the importance of our transportation system to this country.

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-third day of April, in the year of our Lord nineteen hundred and eighty-five, and of the Independence of the United States of America the two hundred and ninth.

RONALD REAGAN

Proclamation 5327 of April 25, 1985

National DES Awareness Week, 1985

By the President of the United States of America A Proclamation

Between 1941 and 1971, a number of pregnant women in the United States were prescribed DES (diethylstilbestrol) to prevent miscarriage. This powerful synthetic hormone was used not only in problem pregnancies but also in some normal pregnancies. As a result, some three million children were exposed to DES while in the womb.

Many scientists fear that exposure to DES may be linked to some forms of cancer. This fear is enough to call attention to the possible health threats faced by past users of DES and their children. Many of the cancers that may be related to DES can be effectively treated if detected at an early, localized stage. Awareness of the threats posed by past DES use should result in increased attention to regular checkups, the first step to effective detection and treatment.

To increase the public understanding of DES exposure, the Congress of the United States, by Senate Joint Resolution 63, has designated the week of April 21 through April 27, 1985, as "National DES Awareness Week" and
